Germ-Allcard

Q8Oils, from its European Industrial centres of excellence, develop, manufacture and market a comprehensive range of soluble and neat lubricants for the rolling and drawing applications of non-ferrous rod, bar, wire, strip, tube and profiles.

The products are marketed under the Q8 family of brands and exported to customers in over 80 countries worldwide either directly or through our network of specialist distributors and agents. This makes us one of the largest global suppliers to the rod, wire, bar, strip, tube and profile industries.

Product sales are supported by our Technical Service, through which our objective is to work with our customers to ensure the optimum productivity in all areas of the product and application to provide our customers cost savings.

The Germ-Allcard brand represents a range of neat and soluble oils, the brand is amongst the most established and well respected in the industry, with a combined heritage of over 200 years’ experience in developing and supplying specialised products to the rod, wire and tube industries.

Whatever the non-ferrous materials, products like Priamus, Wirol, Aludra, Cyroll, Cyldraw and Cyldol have consistently guaranteed the quality of the finished product whilst helping our customers achieve the highest levels of productivity.

Our products are suitable for all machinery and carry approval and recognition from many drawing OEM’s.

Germ-Allcard is also a founding member of the International Wire & Machinery Association (I.W.M.A.) which is a leading corporate worldwide association www.iwma.org.

The Germ-Allcard product range complements the wider Q8Oils ranges of products for the metal manufacturing industries.

Cover shows the Priamus butterfly which gives its name to one of our families of wire drawing lubricants, as the original founder of H.G. Allcard was a renowned butterfly expert.
Consistency of Lubrication
The consistency of the lubrication with newer generation copper wire drawing lubricants can be demonstrated and proven with both laboratory analyses and in live factory applications.

Under controlled identical conditions product technologies can be cross-referenced and compared in our laboratories.

Artificial aging under set criteria provide very stringent conditions for wire drawing emulsion evaluation and analyses.

The unique co-efficient of friction equipment used to determine the wire to capstan lubrication film performance is also used through the emulsion testing. (Fig 2)

This equipment is the only test method which utilises actual wire drawing equipment to measure a drawing emulsion’s lubricating performance and can be considered a more powerful result than more traditional oil industry lubrication test methods such as Falex or Reichert.

The results from this artificial aging process can demonstrate differences from one technology of wire drawing lubricant to another. The lubrication level is monitored to determine if the performance is consistent throughout the emulsion life. This is compared with the tail off in lubrication performance commonly seen with lesser quality products. (Fig 3)

A combination of products and application knowledge, research and development capabilities and a world wide presence makes Q8Oils the perfect business partner. Our mission is to be the product and solution providers by continuing to invest in the rolling and drawing lubricant technology that will protect the long term profitability of our customer and the environment.

Q8Oils, smart engineering solutions
Priamus X7
- Semi-trans Emulsion
- Priamus X7, a semi-synthetic lubricant optimised for copper rod breakdown and intermediate drawing on all high speed slip machines and is suited for rolled, cast, or dipform rod and is also recommended for shaved rod and small section copper strip.

Priamus X10
- Semi-trans Emulsion
- Multipurpose, semi-synthetic wire drawing lubricant, the low reactivity of Priamus X10 results in excellent cleanliness and exceptionally long life even at elevated operating temperatures.

Priamus X11
- Semi-trans Emulsion
- A semi-synthetic lubricant suitable for drawing all copper wire sizes from rod to fine wire on all types of drawing machines. It is also especially suitable for both multi-wire and in-line drawing enamelling machines.

Priamus X255
- Semi-trans Emulsion
- Multipurpose, semi-synthetic wire drawing lubricant, Priamus X255 is suitable for drawing all wire sizes from rod to fine wire, on all types of wire drawing machines and is especially suited for multi-wire machines and in-line drawing.

Priamus V12
- Semi-trans Emulsion
- Multipurpose semi-synthetic wire drawing lubricant, Priamus V12 utilises the latest synthetic ester technology to give excellent cleanliness and low reactivity.

Wirol 2000 LFG
- Clear Solution
- Wirol 2000 LFG is a synthetic product recommended for drawing of intermediate and small wire sizes of plain and tinned wire on both single and multi-line machines. Wirol 2000 LFG is especially recommended for drawing or rolling wire for enamelling. Further specialised applications include nickel plated and silver plated copper wires. Strip and section cold rolling is also possible with Wirol 2000 LFG.

Wirol 2020
- Clear Solution
- Wirol 2020 is a synthetic, very high lubricity product recommended for drawing of intermediate, fine and superfine wire sizes of plain and tinned copper in all applications, single and multi-wire. Wirol 2020 is especially recommended for the tandem in-line drawing or rolling for enamelling. Further specialised applications include the drawing of nickel plated and silver plated copper wires as well as the drawing of precious metals.

Wirol 5000
- Semi-trans Emulsion
- Wirol 5000, a semi-synthetic lubricant is optimised for drawing plain and tinned copper wire of intermediate, fine and superfine sizes on single and multi-line machines. Independent tests show that Wirol 5000 can reduce tension breaks on multi-line machines by approx 40% compared with other products in identical conditions.

The Germ-Allcard copper wire drawing lubricants are formulated to provide the optimum balance of lubrication and cleanliness. This balance provides greater die and capstan protection, long emulsion life and consistent production eliminating manufacturing downtime.

Annealing Fluid

Annealer Fluid-LF
- Annealer Fluid-LF is a fully synthetic, water-soluble additive that is entirely free from mineral oil and conventional fatty soaps. Annealer Fluid-LF is recommended for use in the cooling water of continuous annealers for both plain and tinned copper wire production.
Aluminium Wire Drawing

Germ-Allcard provide a range of products for the drawing of Aluminium and Aluminium alloys, these products are suitable for slip, limited slip and non-slip drawing applications in high and slow speed wire drawing machines. Lubricants for the drawing of Single or Twin Rod, Intermediate, Fine and Super Fine applications are available and these provide benefits of long lubricant life and enhanced brightness of the drawn aluminium. Within our range we can offer options to our customers, either to use a NEAT or SOLUBLE OIL for the drawing applications.

**Neat**

Germ-Allcard ALUDRA which is a range of neat drawing oils are formulated using our own unique Q8 base oils which have exceptional characteristics of high oxidation stability and low sulphur levels. These properties promote a longer lubricant life, reduced topping and a brighter surface finish to the drawn aluminium. The ALUDRA products are also enhanced with synthetic lubricity additives and performance additives to provide lubrication and protection to the dies and capstan surfaces.

**Soluble**

The latest generation of Germ-Allcard PRIAMUS soluble oils are very successful for the high speed drawing of Aluminium and Aluminium alloys. These emulsions provide substantial benefits over the use of neat oils for the aluminium drawing application in both high and slow speed applications. The Germ-Allcard PRIAMUS products are clean in use, provide exceptional cooling and promote a very clean drawn wire surface. These soluble drawing oils complement the Germ-Allcard CYLROLL, hot rolling emulsions for aluminium thereby keeping a clean rod and wire throughout the rolling and drawing process.

Please consult our technical department for more details, also referring to the technical papers for aluminium wire drawing using neat and soluble wire drawing lubricants.

The Germ-Allcard range of emulsifiable oils form stable and highly effective emulsions for the hot and cold rolling of non-ferrous rod and strip. The range includes specific grades for hot rolling continuously cast copper and aluminium on Southwire, Contirod and Properzi mills. Complementing the range are the Q8 Bach R Series Neat Rolling Lubricants for strip production.
Yellow Metal Protectives

These are specialised products for the increased protection of yellow metals. They include wax-coat protection of hot rolled continuously cast and upcast copper as well as quenching protection products for copper and alloy hot extrusion of tubes and profiles.

**Copprotect H**
Wax coat protective for copper rod following the rolling or upcast application, it contains a unique wax substitute to give a tacky finish for neat rod coiling, including an advanced yellow metal protection package for humid conditions.

**Copprotect Z**
Copprotect Z can be used in virtually any system or environment where the requirement is to prevent the corrosion of copper ions in accelerating the degradation of other metals or components. It can be used at various concentrations ranging from 0.05% in water.

With the two ranges of non-ferrous tube drawing lubricants from Germ-Allcard are advanced lubricants for Bench and Block drawing of copper, aluminium and alloy tubes.
Stainless Steel Bar, Rod & Wire

These are lubricants developed for the wet drawing of stainless steel and alloy steel bars, rods, wires and section. In addition to these drawing lubricants we also have a full range of products developed for the bar and rod manufacturing process which have the OEM approval of Danieli.

Within the Germ-Allcard portfolio there is a comprehensive range of ancillary products to complement our wire and tube drawing lubricants. These include: System Cleaners, Biocides, Antifoams, pH Buffers and Copper Protectives.

Within the Q8 family of brands, we have complementary products including Rolling emulsions for Welded Tubes, Rolling Oils, High Temperature Chain Oils and a full range of Metalworking Products, please refer to our Product Portfolio list and technical department.
**Product Portfolio**

Q8Oils product portfolio consists of over 1,000 grades of finished lubricants, process oils, extracts and waxes. This comprehensive range makes Q8Oils one of the most complete suppliers of lubricants and petroleum based products in the industry.

*For the Metal Manufacturing Industries, our product range includes the following:*

- Wire Drawing Lubricants for Copper, Aluminium and all other Non-Ferrous Metals
- Full Synthetic Wire Drawing Lubricants for Fine and Super fine sizes
- Rolling Emulsions for the Hot Rolling of Continuously Cast Copper and Aluminium
- Yellow Metal Protective for Hot Rolled Copper, and all other Copper Applications
- Tube Drawing Lubricants for Copper, Aluminium and all other Non-Ferrous Metals
- Tube Rolling and Drawing Lubricants for Welded Tubes, Steel and Stainless Steel
- Bar Drawing Oils
- Rolling Emulsions for the Cold Rolling of Copper, Aluminium and other materials
- Cold Rolling Oils for Stainless Steel, Copper, Brass and Phosphor Bronze
- High Temperature Chain Oils for Production Conveyor Systems
- Heat Treatment Oils and Emulsions
- Wire Rope Lubricants and Greases
- Casting Lubricants
- Corrosion Protectives for all Metals
- Greases
- Morgan Bearing Oils
- Soluble Metalworking Fluids for Metal Removal, all applications
- Neat Metalworking Oils for Metal Removal, all applications
- Neat and Soluble Pressworking, Punching and Forming Oils
- Vanishing Pressforming Oils for Electrical Connectors
- Biodegradable and Renewable Resource Products
- Wash Fluids
- Comprehensive Range of Plant Maintenance Oils and Greases, including Danielli approved Products
- Energy Products, including Gas Engine, Wind Turbine and Turbine Oils
- Technical Services and Support for all our Products

This is not an exhaustive list, hence if your product requirement is not shown, please contact your Customer Service or Technical Contacts.

A combination of products and application knowledge, research & development capabilities and a worldwide presence makes Q8Oils the perfect business partner. Our mission is to be the product and solution providers by continuing to invest in the lubricant technology that will protect the long term profitability of our customers and the environment.
Q8Oils is part of the Kuwait Petroleum Corporation (KPC), one of the world’s largest oil companies. With 120 years of known reserves and crude oil production levels of 2.9 million barrels per day, it is ranked the seventh largest oil producer in the world. KPC’s business spans every segment of the hydrocarbon industry: on and offshore exploration, production, refining, marketing, retailing, petrochemicals and marine transportation.

Backed by the significant corporate resources of our parent company, Q8Oils is a fully integrated lubricants organisation. We refine our own high quality base oils from Kuwait Export Crude, manufacture an extensive range of oils in our own blending plants and have established state of the art European laboratories for development and technical support work. Today, Q8Oils wire and tube drawing fluids are used by customers in over 80 countries around the world.
