Niet toepasbaar

Aluminium, voor puur aluminium en voor niet-gespecialiseerde bewerkingen

Automotive aluminium, voor de legeringen met een hoog siliciumgehalte die worden geproduceerd door middel van spuitgietprocessen, die doorgaans worden gebruikt in autowielen en motorcarrosserieën. Deze legeringen zijn minder gevoelig voor corrosie, maar vereisen producten met een hoog oliegehalte

Ruimtevaart aluminium, waaronder 2000 en 7000, is veel gevoeliger voor corrosie

De aluminiumlegering 6000 is gebruikelijk in zowel de automobiel- als de ruimtevaartindustrie
