

Q8 Ravel 4342

Low viscosity short-term corrosion preventive oil

Description

Q8 Ravel 4342 is a low viscosity corrosion preventive oil and contains no solvents. It is especially developed for protection of copper and copper alloy strips and sheets for about a maximum of 2 months.

Applications

On exposure to air most metals become covered with an oxide layer. Corrosion protective oils protect the surface from forming metal oxide layers. Q8 Ravel 4342 is developed for the protection of copper and copper alloy strips and sheets.

User instructions

In order to preserve the integrity of this product drums should be stored inside a building protected from frost and direct sunlight.

Environment, Health and Safety

Please consult the Material Safety Data Sheet for instructions regarding safe handling and environmental issues.

Properties

	Method	Unit	Typical
Appearance	Visual	-	Bright & clear
Kinematic Viscosity, 40 °C	D 445	mm ² /s	8.5
Flash Point, COC	D 92	°C	128
Density, 15 °C	D 4052	g/ml	0.85

The figures above are not a specification. They are typical figures obtained within production tolerances.

Remarks

Please contact your Q8Oils representative for further advice and support on your specific application and equipment.

Sustainability

The product Carbon Footprint (PCF), cradle-to-gate (Q8Oils state of the art facility in Belgium), of Q8 Ravel 4342 is **1.31** kg CO₂eq / kg.

Please contact Q8Oils to learn more about the positive environmental impact, the handprint, of this product.

To ensure accuracy and reliability, the PCF calculation tool has been verified by an independent third party. The verification report is available in the disclaimer.
